Summary

Computer Science student at Nirma University (CGPA 8.34) and Diploma topper (9.71) who ships production software solo. Built and deployed **two live AI SaaS products**, a cross-platform mobile app, and a set of **measured** GenAI systems — multimodal LLM pipelines, multi-agent orchestration, RAG, and federated learning with differential privacy. Comfortable owning a product end to end: data model, backend, AI layer, interface, and deploy.

Education

Nirma University

Bachelor of Technology in Computer Science

Ahmedabad, Gujarat

July 2024 – July 2027

- **CGPA: 8.34/10** Coursework: Data Structures & Algorithms, System Design, Database Management, Machine Learning, Operating Systems

Government Polytechnic Ahmedabad

*Diploma in Information Technology — **Topper***

Ahmedabad, Gujarat

January 2021 – July 2024

- **CGPA: 9.71/10** Back-End Development, Android Development, PHP, Machine Learning

Experience

Full Stack Developer Intern

Alvi Software Pvt. Ltd.

May 2026 – July 2026

Ahmedabad, India

- Built front-end interfaces and back-end services in a production codebase, covering database management, **REST API integration**, and debugging
- Delivered assigned full-stack features to schedule within a professional development team, working the full cycle from requirement to deployment

Software Development Intern (Android)

BrainyBeam Technologies Pvt. Ltd.

July 2023 – August 2023

Ahmedabad, India

- Built multiple Android screens in a production codebase under senior engineers — registration, login, and profile management — with client-side validation
- Followed **Git** version-control and code-review workflows to ship maintainable, lifecycle-aware (MVC) modules

Software Development Intern

InfoLabz

August 2022 – September 2022

Ahmedabad, India

- Built web and backend modules against real client requirements across the full software development lifecycle

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, Solidity, PHP, Shell

AI / Machine Learning: LLM Integration (Gemini, Groq), RAG, Multi-Agent Systems (LangGraph), LLM Fine-tuning (QLoRA), Prompt Engineering, LLM Evaluation & Guardrails, PyTorch, Scikit-learn, NLP, Multimodal AI, Federated Learning, Differential Privacy

Backend & Databases: FastAPI, Node.js, Express.js, REST APIs, System Design, Multi-Tenant Architecture, Row-Level Security, PostgreSQL, MySQL, Supabase, MongoDB, Redis

Frontend & Mobile: React.js, Next.js, React Native, Expo, Tailwind CSS

Tools & Cloud: Git, GitHub, Docker, Linux, CI/CD, AWS, Google Cloud, Vercel, Twilio, Razorpay, Automated Testing

Projects

BillAI — AI GST Invoicing on WhatsApp | *Next.js, Gemini AI, Supabase, Twilio* | 🌐 **Live**

May 2026

- Built and deployed a **live production SaaS solo in 2 weeks** — lets Indian small businesses create GST-compliant invoices in under 10 seconds, straight from WhatsApp
- Engineered a **multimodal AI pipeline** (Google Gemini) extracting structured invoice data from text, voice notes, and images across Gujarati, Hindi, and English
- Built a stateful WhatsApp bot (Twilio) and a GST engine spanning all **36 state codes**; automated GSTR-1 reports and recurring invoices via cron jobs
- Architected a secure **multi-tenant** backend (PostgreSQL Row-Level Security) integrating 5 external services; **Lighthouse 95+** in production

LexAI — AI Legal Drafting & e-Signing | *Next.js, Gemini AI, Supabase, Razorpay* | 🌐 **Live**

June 2026

- Shipped a **second live SaaS** that drafts **Indian-law-compliant** legal documents from a plain-English or WhatsApp prompt — **30 templates** across employment, business, real estate, and notices
- Engineered a **Gemini** pipeline extracting parties, terms, durations, and amounts into formatted PDFs, plus **AI contract risk analysis** flagging unfavorable and missing clauses
- Implemented a swap-ready **Aadhaar e-Sign** adapter (multi-party sequential signing with full audit trail), a versioned document vault, and Razorpay subscriptions

FedChurnGuard — Privacy-Preserving Federated Learning | *PyTorch, Flower, Solidity* | [🌐 Live](#) July 2026

- Built genuine **cross-organization federated learning** (Flower) on separately-owned datasets — rival companies train one churn model while raw customer data never leaves any silo
- Implemented record-level **differential privacy** (DP-SGD via Opacus) with verified ϵ -accounting, hardened against a LiRA membership-inference attack
- Added a permissioned **blockchain audit layer** (Solidity, Ethereum Sepolia) that rejects **100% of boosted model-poisoning attacks** and logs retention offers immutably
- Closed the loop with explainability: TreeSHAP → counterfactual recourse → on-chain retention offer; authored a paper in IEEE Access format

GenAI Systems — Agents, Text-to-SQL & Evaluation | *Python, LangGraph, Groq, Streamlit* 2026

- **Multi-agent research assistant** (LangGraph): a planner decomposes the question, parallel researchers search and read the live web, a writer produces a cited report. Benchmarked vs a single-agent baseline over 20 queries — **100% task completion, 10.5 vs 3.8 citations** per report, 4.9 tool-call failures recovered per run [🌐 Live](#)
- **Self-correcting text-to-SQL agent**: a read-only executor feeds SQL errors and empty result-sets back to the model over a 3-attempt loop — **78% execution accuracy** on 50 Spider-dev questions with test-suite-style result matching [🌐 Live](#)
- **LLM evaluation & guardrails harness**: rubric-based LLM-as-judge plus a CI regression gate that caught a per-case failure aggregate metrics hid; explainable **prompt-injection detector** across 11 signal families — **89.8% accuracy**, 91.7% precision, 8.3% false-positive rate [🌐 Live](#)

Trustly — Cross-Platform Reputation Network | *React Native, Expo, Supabase, PostGIS* | [🌐 Code](#) June 2026

- Built a social reputation platform — profiles, reviews, radius discovery, and a photo/video feed — running on **iOS and Android from a single type-safe React Native codebase**
- Engineered a Supabase/PostgreSQL backend across **15 migrations** with Row-Level Security and SECURITY DEFINER triggers over a five-profile-type multi-tenant model
- Implemented **PostGIS** radius search ranked by a credibility-weighted **Bayesian rating**, with review-bombing and fake-account detection; shipped signed releases via an **EAS CI/CD** pipeline

MEHFIL — Cinematic Retro Music Web App | *Next.js, GSAP, Web Audio API* | [🌐 Live](#) July 2026

- Built a **scroll-as-camera** homepage — native scroll drives a pinned, GPU-only scene through four media eras (shellac → vinyl → cassette → CD); **Lighthouse 99/100/100/100** in production
- Engineered deterministic generative art (a seeded **SVG** sleeve unique per track) across a 210-track catalog via the YouTube Data API, and synthesized all sound design with the **Web Audio API** — zero audio files
- Shipped multilingual fuzzy search (Devanagari, Gurmukhi, Bengali, Latin) with **WCAG AA** accessibility and full reduced-motion fallbacks

Also built: **BASIS** — a market-spread monitoring desk (rolling z-scores, mean-reversion half-life, ADF tests) · **VoiceServe** — AI voice ordering with association-rule upselling · **HireAi** — ML resume ranking and adaptive assessments · **Portfolio** — a custom 2D canvas engine with 3 adaptive performance tiers.

Certifications & Hackathons

Certifications: AWS Academy Graduate — Cloud Foundations · Machine Learning Specialization (DeepLearning.AI & Stanford Online) · **19 Google Cloud Skill Badges** (Vertex AI prompt design, Gemini apps, Pub/Sub, Looker, Dataplex) · Claude 101 and AI Fluency (Anthropic)

Hackathons: **HACKaMINeD 2026** (Nirma × Binghamton) — built *VoiceServe* for the Petpooja industry track · **Codeversity National Hackathon 2026**, AI domain (IIT Gandhinagar) — built *HireAi* · **SSIP New India Vibrant Hackathon** (Gov. of Gujarat)
